	Section 15.212 Modular Transmitters				
Reques	Request for Modular Approval Y Request for Limited Modular Approval				
	Requireme	nts	EUT Conditions	Comply (Y/N)	
		Single Modular	Approval Requirements		
1	transmitter shielding. I tuning capa	elements of the modular must have their own The physical crystal and acitors may be located the shielded radio	Yes, this RF Module has own RF shielding and therefore comply to this requirement. The RF Module is subject to Professional Installation and Integrator is advised by the integration manual how to assure compliance of final end-product into which this RF Module is integrated to the FCC regulations.	Y	
2	buffered m such inputs that the mo	ar transmitter must have odulation/data inputs (if are provided) to ensure dule will comply with Part ments under conditions of lata rates or lation.	Please refer the Schematic, The modular transmitter have buffered modulation/data inputs U101	Y	
3		ar transmitter must have its supply regulation.	The modular has it's own power supply regulation.	Y	
4	with the an system requestion 15.203, 15. antenna mu attached or coupler (at the module the cable). installation 15.203 is no but can app	ar transmitter must comply tenna and transmission uirements of Sections 204(b) and 15.204(c). The ast either be permanently employ a "unique" antenna all connections between and the antenna, including The "professional" provision of Section ot applicable to modules by to limited modular under paragraph (b) of this	Referring to onboard Ceramic antenna	Y	

The modular transmitter must be tested in a stand-alone configuration, i.e., the module must not be inside another device during testing for compliance with Part 15 requirements. Unless the transmitter module will be battery powered, it must comply with the AC line conducted requirements found in Section 15.207. AC or DC power lines and data input/output lines connected to the module must not contain ferrites, unless they will be marketed with the module (see Section 15.27(a)). The length of these lines shall be the length typical of actual use or, if that length is unknown, at least 10 centimeters to insure that there is no coupling between the case of the module and supporting equipment. Any accessories, peripherals, or support equipment connected to the module during testing shall be unmodified and commercially available equipment. Any accessories, peripherals, or support equipment connected to the module during testing shall be unmodified and commercially available (see Section 15.31(i)).

6	The modular transmitter must be	The modular was labeled with its own	Y	
	equipped with either a permanently	FCC ID. The outside of device in to		
	affixed label or must be capable of	which the module is installed will		
	electronically displaying its FCC	labeled 'Contains TX FCC ID:		
	identification number. (A) If using a	2AHUYBM01, Please refer to User		
	permanently affixed label, the modular	Manual		
	transmitter must be labeled with its own			
	FCC identification number, and, if the			
	FCC identification number is not visible			
	when the module is installed inside			
	another device, then the outside of the			
	device into which the module is installed			
	must also display a label referring to the			
	enclosed module. This exterior label can			
	use wording such as the following:			
	"Contains Transmitter Module FCC ID:			
	XYZMODEL1" or "Contains FCC ID:			
	XYZMODEL1." Any similar wording			
	that expresses the same meaning may be			
	used. The Grantee may either provide			
	such a label, an example of which must			

1EL. +03 03	70 6522 FAX: +65 6570 6522		
TEL. +65 65	be included in the application for equipment authorization, or, must provide adequate instructions along with the module which explain this requirement. In the latter case, a copy of these instructions must be included in the application for equipment authorization. (B) If the modular transmitter uses an electronic display of the FCC identification number, the information must be readily accessible and visible on the modular transmitter or on the device in which it is installed. If the module is installed inside another device, then the outside of the device into which the module is installed must display a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains FCC certified transmitter module(s)." Any similar wording that expresses the same meaning may be used. The user manual must include instructions on how to access the electronic display. A copy of these		
7	instructions must be included in the application for equipment authorization. The modular transmitter must comply with any specific rules or operating requirements that ordinarily apply to a complete transmitter and the manufacturer must provide adequate instructions along with the module to explain any such requirements. A copy of these instructions must be included in the application for equipment authorization.	The modular is comply with all applicable FCC rules. Any modifications, not expressly approved by the manufacturer could void the authority to operate in these regions.	Y

8	The modular transmitter must comply	With the documented max output power	Y
	with any applicable RF exposure	this RF Module meets the FCC SAR	
	requirements in its final configuration.	Exemption - so it can be integrated in any	
		host device (portable/mobile/fixed) with	
		further restrictions.	

A limited modular approval may be granted for single or split modular transmitters that do not comply with all of the above requirements, *e.g.*, shielding, minimum signaling amplitude, buffered modulation/data inputs, or power supply regulation, if the manufacturer can demonstrate by alternative means in the application for equipment authorization that the modular transmitter meets all the applicable Part 15 requirements under the operating conditions in which the transmitter will be used. Limited modular approval also may be granted in those instances where compliance with RF exposure rules is demonstrated only for particular product configurations. The applicant for certification must state how control of the end product into which the module will be installed will be maintained such that full compliance of the end product is always ensured.
